

Asustor All-In-One Backup Appliance

Centrally Back-up All VMs, Databases, Office 365, and Cloud Data for SMEs

Powered by Ahsay Backup

Asustor All-In-One Backup Appliance is an enterprise class backup appliance bundled with Ahsay Backup Software for SMEs to centrally back up all their mission critical data from their on-premises servers and desktops, staff's mobile devices, and data on the cloud, including Office 365, and other common public cloud storage. These data can also be replicated to Ahsay Cloud Storage, or SME's own public cloud storage account (e.g. Microsoft Azure, OneDrive for Business, etc.) for offsite protection. This total backup solution can give SMEs peace of mind in data protection.

How it works

Key Benefits

Backup All Kinds of Data

VMware, Hyper-V, Microsoft Exchange Server, Microsoft SQL Server, Oracle and MySQL Databases, Lotus Domino / Notes, Windows System, System State and Office 365 can all be backed up professionally.

Virtual Machine Backup

The backup agent supports backing up VMware and Hyper-V guest VMs with Instant Recovery and Granular Restore capabilities, that allows user to spin up a VM instantly without restoring the full VM, and to restore individual files within a backed up VM without the need to spinning up first.

Secure Encryption

Truly randomized 256-bit full length AES encryption key will be used by default to encrypt the backup data. Such encryption is simply unbreakable by any super computer.

Retention / Versioning

You can define flexible data retention (versioning) rules to keep the historical versions of your data. If you need to keep more recent versions and fewer over time, it can be easily achieved through the retention policy setup.

3 Copies to Prevent Data Loss

To avoid disastrous data loss, the best practice is to keep at least 3 copies of your data: one on your original machine; one to a dedicated local storage; another to offsite storage to prevent local disaster from destroying all your local data. With our solution, you will have 3 copies of data to eliminate data loss possibility.

Restorability Guaranteed

No one wants to experience trouble during restore. Therefore, you need a backup solution that can guarantee the restorability of your backed up data. With the built-in CRC data integrity checking, verification and rectification, your backup data are 100% restorable.

Continuous Backup

For frequently changing data in Windows OS, you can enable the Continuous Backup feature in the client agent so that it will keep backing up your data in the background continuously.

Backup Android, iOS devices

To help protect the data on mobile devices, the solution comes with Android and iOS mobile backup apps that can backup user generated contents, including photo, video, contact, voice*, message*, bookmark*, and WhatsApp* to the Backup Appliance.

* Android devices only

Support Windows, Mac, Linux

Got machines with different operating platforms to backup? Our client backup agent can be installed on Windows, Mac OS X and Linux, allowing you to backup all your machines with the same solution.

Consolidated Daily Report

Consolidated Report will be sent to administrator everyday with crystal clear visibility on all backup users' activities, backup and restore status, warnings, and errors so that administrator can quickly troubleshoot.

Real Time Status Monitoring

Real time status of the system, current backup and restore jobs, errors and warnings, etc. are available at a glance for administrator to monitor the health of the backup system and troubleshoot quickly when needed.

Easy to Use

The backup agent comes with the most intuitive user interface that is so easy to use. No training will be required to get started. Whenever you need assistance, the Help button on each page provides you with the answer right away.

Pricing

Hardware

Asustor AS6210T

- OS: Linux Debian 8
- CPU: Intel Celeron 1.6GHz Quad Core
- RAM: 4GB DDR3L (Max. 8GB)
- HDD: 10 x 2.5"/3.5" SATA or SSD (Max. 100TB)
- 3 years carry-in maintenance

Backup Software

AhsayOBM (client agent for backing up servers, VMs)

HK\$ 960 / device

Includes free File, IBM Lotus Domino, IBM Lotus Notes, Microsoft Exchange Server Database, Microsoft SQL Server, MySQL Database, Oracle Database, Windows System, Windows Systems State backup modules.

- **VMware/Hyper-V Guest VM module** HK\$ 360 / VM
- **Office 365 mailbox module** HK\$ 175 / mailbox
- **MS Exchange mailbox module** HK\$ 175 / mailbox
- **Mobile backup agent** HK\$ 142 / OBM account

AhsayACB (client agent for backing up servers, VMs)

HK\$ 415 / device

Includes free File, IBM Lotus Notes, and Windows System backup modules.

- **Mobile backup agent** HK\$ 142 / ACB account

AhsayCBS centralized management console installed on Asustor

HK\$ 4914 / installation

Offsite Replication (optional)

Ahsay Cloud Storage (as secondary offsite backup destination) HK\$ 50 / GB / Month

Replication module for AhsayOBM HK\$ 229 / OBM

Replication module for AhsayACB HK\$ 88 / ACB
